Parkmanagement be.Web

Modular components for your professional parking space management

bebarmatic

FIRST CLASS PARKING

Central parking management be. Web

The versatile parking management system be. Web is a web-based management tool for controlling your Platinum Modular parking management system.

Responsive web interface

Enables use on PCs, tablets and smartphones without additional software such as Java or similar

- Management of short- and long-term parkers Media-independent with recognition of barcode, QR code, number plate or UHF tags, creation of special tickets and parking groups, receipt of all data for controlling operational processing as well as reporting and analysis.
- Convenient count management
 Individually adaptable to all requirements,
 block formation of groups, definition of
 threshold and maximum values.

Password-protected access

Definition of individual user authorisations, encrypted communication of the system, audit-proof storage of customer and cash flow data in a central database.

Central management of the configuration
 Software releases, modular structure, real-time display of system statuses, creation of all standard reports / customisations according to parking areas, discounts and time periods.

Software development

Competent in-house development team. Customised, individual solutions. Industryspecific implementations.

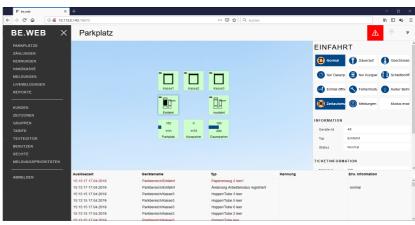

Remote maintenance and remote analysis
 Remote maintenance using established
 software, analysis of faults down to hardware level.

Customised special solutions

Special industry solutions, connection of thirdparty software via SOAP interface, mapping of events and functions with individual tariffs.

Support

High reliability through rapid assistance in the event of service, service concept tailored to your needs with target-oriented, rapid processing.
